Try Lotus

- **what you need to know.**

From email that connects your inbox to corporate data and live Web 2.0 content, to mashup applications customized around your business needs, to our web-based platform that lets you collaborate in the cloud, Lotus knows how to help you and your team work smarter and faster.

- **that sometimes 36 emails is just one conversation.**

Lotus Notes® groups all related emails into a single conversation, so you never have to waste time sorting through an endless inbox again.

- **mashups.**

With IBM® Mashup Center, you can combine data feeds to create useful widgets and mashups and share them with your colleagues. So everyone benefits from one person's insight.

- **that the world is getting smaller.**

LotusLive™ brings collaboration and social networking capabilities online. So it doesn't matter if your team works on different floors or on different continents. They still have all the right tools needed to work together.

- **that every computer is a phone in disguise.**

With Lotus Sametime® you can save on expensive cell phone roaming charges and international calls by using your computer's microphone and speakers to make calls.

- **when you're available for a chat.**

With Lotus Sametime Unified Telephony and online presence, you can see if your coworkers are on the phone or in a meeting, where they are, and what device they're using, so you always know when the best time to contact them is.

- **who knows.**

Lotus Connections lets you share and tag your bookmarks of relevant documents, discussions, and websites so they're easily accessible to your whole team. Which means everyone can spend more time working without interruption and less time tracking down information.

- **where you put that file.**

Lotus Quickr file library stores your files securely online so you can always find and share them quickly, whenever and wherever you need them.
